

Portfolio Health Report

Informational summary — not individualized financial advice | Total value: \$11,330.26 | 11 holdings

Executive Summary

This is an 11-position, all-single-stock U.S.-equity portfolio (no bonds, funds, or cash) worth **\$11,330.26** total. Ten holdings are U.S.-domiciled; one (SKHY) is a South Korean ADR. The portfolio is broadly diversified by sector on paper, but several holdings share common drivers (health care sentiment, oil prices, AI-infrastructure spending) that reduce real diversification below what the sector labels suggest. The single most important flag: **Health Care (LLY + WST) at 26.10% is the one sector concentration that exceeds the 20–25% comfort band** — every other flag is within band or qualitative in nature.

Portfolio Snapshot

Four positions — LLY, WST, FANG, XOM — make up ~49% of the portfolio combined. By sector: Health Care 26.10%, Energy 22.67%, IT 22.83%, Consumer Staples 9.31%, Consumer Discretionary 8.21%, Financials 6.52%, Utilities 4.36%.

Ticker	Sector	% of Portfolio
LLY	Health Care — Pharmaceuticals	13.40%
WST	Health Care — Equipment & Supplies	12.70%
FANG	Energy — Oil & Gas E&P	12.32%
XOM	Energy — Integrated Oil & Gas	10.35%
COST	Consumer Staples — Merchandise Retail	9.31%
PANW	IT — Cybersecurity	8.71%
AMZN	Consumer Discretionary — Broadline Retail	8.21%
SKHY	IT — Semiconductors (ADR)	7.11%
MSFT	IT — Systems Software	7.01%
BRK/B	Financials — Multi-Sector Holdings	6.52%
PNW	Utilities — Electric Utilities	4.36%

Bars are grouped by sector (color) and sorted by size within each group. The dashed line marks the 10% single-position concentration threshold used in the risk review; ▲ flags the four positions above it.

Risk Considerations

Concentration

- Health Care (LLY+WST) = **26.10%** — the one sector exceeding the 20–25% comfort band.
- Energy (FANG+XOM) = **22.67%** — within band, but both names move with oil prices, so it behaves like one bet, not two.
- IT (MSFT+PANW+SKHY) = **22.83%** — within band.
- Cross-label AI-infrastructure theme (AMZN+MSFT+PANW+SKHY) = **31.04%** — spans two sector labels; sector view likely understates this shared exposure (moderate-confidence judgment).

- PANW (8.71%) has elevated near-term volatility from acquisition rumors + pending earnings.
- Four single positions sit above ~10% (LLY 13.40%, WST 12.70%, FANG 12.32%, XOM 10.35%); none exceed 15%, LLY is closest.
- SKHY (7.11%) is the only non-U.S.-domiciled holding (South Korea, ADR).

Volatility

- 100% single-stock, no funds/bonds/cash — full idiosyncratic risk, no built-in cushioning.
- Higher-beta/event-driven names: FANG, SKHY, PANW, AMZN, WST.
- Defensive counterweights: BRK/B+COST+PNW = **20.19%** combined.
- PANW and SKHY carry extra near-term uncertainty.
- No numeric beta/stdev data available — all volatility calls are qualitative.

Correlation

- FANG+XOM: direct, mechanical oil-price link — limited diversification benefit between the two.
- LLY+WST: more indirect, sector-sentiment/policy-driven link.
- AMZN+MSFT+PANW+SKHY (31.04%): shared AI-infrastructure/capex driver, largest correlated cluster in the portfolio.
- Softer growth/rate-sensitivity cluster: AMZN, MSFT, PANW, and to a lesser extent LLY.
- PNW: weak, low-confidence indirect tie to the AI cluster via power-demand narratives.
- BRK/B and COST: no correlation-cluster flag — the portfolio's relative diversifiers.

Data-quality note: PANW's price is the most uncertain figure used (\$339–\$388 range across sources); WST, PNW, and COST prices are moderately uncertain; SKHY is a recently-listed ADR (July 2026) with limited price history; source prices span Aug 27–30, 2026, not one synchronized timestamp.

Considerations to Discuss with an Advisor

- How comfortable you are with Health Care at 26.10% — the one concentration outside the comfort band.
- Whether the FANG+XOM energy pairing matches your intent, given it functions as one oil-price bet rather than two diversified positions.
- How to think about the 31.04% AI-infrastructure theme that spans two official sector labels (Consumer Discretionary + IT).
- Your comfort with near-term swings in PANW and SKHY specifically, given their elevated/short-history uncertainty.
- Whether an all-single-stock, no-fund/bond/cash structure still matches your intended risk tolerance and time horizon.
- Whether current geographic exposure (only SKHY non-U.S.) and the price uncertainties noted above (especially PANW) should factor into how you read the percentages in this report.
